

CSci 127: Introduction to Computer Science

hunter.cuny.edu/csci

Today's Topics

- Recap of Low-Level Programming
- Introducing C++
- Hello, World in C++
- I/O and Definite Loops in C++
- Final Exam Overview

Low-Level vs. High-Level Languages

- Can view programming languages on a continuum.

Low-Level vs. High-Level Languages

- Can view programming languages on a continuum.
- Those that directly access machine instructions & memory and have little abstraction are **low-level languages**

Low-Level vs. High-Level Languages

- Can view programming languages on a continuum.
- Those that directly access machine instructions & memory and have little abstraction are **low-level languages** (e.g. machine language, assembly language).

Low-Level vs. High-Level Languages

- Can view programming languages on a continuum.
- Those that directly access machine instructions & memory and have little abstraction are **low-level languages** (e.g. machine language, assembly language).
- Those that have strong abstraction (allow programming paradigms independent of the machine details, such as complex variables, functions and looping that do not translate directly into machine code) are called **high-level languages**.

Low-Level vs. High-Level Languages

- Can view programming languages on a continuum.
- Those that directly access machine instructions & memory and have little abstraction are **low-level languages** (e.g. machine language, assembly language).
- Those that have strong abstraction (allow programming paradigms independent of the machine details, such as complex variables, functions and looping that do not translate directly into machine code) are called **high-level languages**.
- Some languages, like C, are in between– allowing both low level access and high level data structures.

Machine Language

- We will be writing programs in a simplified machine language, WeMIPS.

(Demo with WeMIPS)

In Pairs or Triples:

- Write a complete **Python program** that converts kilograms to pounds.
- *Predict what the C++ code will do:*

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello |" << year << "!!\n\n";
11    return 0;
12 }
```

Python Tutor

- Write a complete **Python program** that converts kilograms to pounds.

(Write from scratch in pythonTutor.)

onlinedb demo

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello !" << year << "!\n\n";
11    return 0;
12 }
```

(Demo with onlinedb)

Introduction to C++

- C++ is a popular programming language that extends C.

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

Introduction to C++

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

- C++ is a popular programming language that extends C.
- Fast, efficient, and powerful.

Introduction to C++

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

- C++ is a popular programming language that extends C.
- Fast, efficient, and powerful.
- Used for systems programming (and future courses!).

Introduction to C++

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

- C++ is a popular programming language that extends C.
- Fast, efficient, and powerful.
- Used for systems programming (and future courses!).
- Today, we'll introduce the basic structure and simple input/output (I/O) in C/C++.

Introduction to C++

- Programs are organized in functions.

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

Introduction to C++

- Programs are organized in functions.
- Variables must be **declared** before used:

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

Introduction to C++

- Programs are organized in functions.
- Variables must be **declared** before used:

```
int num;
```

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

Introduction to C++

- Programs are organized in functions.
- Variables must be **declared** before used:
`int num;`
- Many types available:
`int, float, char, ...`

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

Introduction to C++

- Programs are organized in functions.
- Variables must be **declared** before used:
`int num;`
- Many types available:
`int, float, char, ...`
- To print, we'll use `cout <<`:

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

Introduction to C++

- Programs are organized in functions.
- Variables must be **declared** before used:
`int num;`
- Many types available:
`int, float, char, ...`
- To print, we'll use `cout <<`:
`cout << "Hello!!"`

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

Introduction to C++

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

- Programs are organized in functions.
- Variables must be **declared** before used:
`int num;`
- Many types available:
`int, float, char, ...`
- To print, we'll use `cout <<`:
`cout << "Hello!!"`
- To get input, we'll use `cin >>`:

Introduction to C++

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

- Programs are organized in functions.
- Variables must be **declared** before used:
`int num;`
- Many types available:
`int, float, char, ...`
- To print, we'll use `cout <<`:
`cout << "Hello!!"`
- To get input, we'll use `cin >>`:
`cin >> num`

Introduction to C++

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

- Programs are organized in functions.
- Variables must be **declared** before used:
`int num;`
- Many types available:
`int, float, char, ...`
- To print, we'll use `cout <<`:
`cout << "Hello!!"`
- To get input, we'll use `cin >>`:
`cin >> num`
- To use those I/O functions, we put at the top of the program:

Introduction to C++

```
1 //Another C++ program, demonstrating variables
2 #include <iostream>
3 using namespace std;
4
5 int main ()
6 {
7     int year;
8     cout << "Enter a number: ";
9     cin >> year;
10    cout << "Hello ! << year << "!!\n\n";
11    return 0;
12 }
```

- Programs are organized in functions.
- Variables must be **declared** before used:
`int num;`
- Many types available:
`int, float, char, ...`
- To print, we'll use `cout <<`:
`cout << "Hello!!"`
- To get input, we'll use `cin >>`:
`cin >> num`
- To use those I/O functions, we put at the top of the program:
`#include <iostream>`
`using namespace std;`

In Pairs or Triples:

Predict what the following pieces of code will do:

```
//Another C++ program, demonstrating I/O & arithmetic
#include <iostream>
using namespace std;

int main ()
{
    float kg, lbs;
    cout << "Enter kg: ";
    cin >> kg;
    lbs = kg * 2.2;
    cout << endl << "Lbs: " << lbs << "\n\n";
    return 0;
}
```

C++ Demo

```
//Another C++ program, demonstrating I/O & arithmetic
#include <iostream>
using namespace std;

int main ()
{
    float kg, lbs;
    cout << "Enter kg: ";
    cin >> kg;
    lbs = kg * 2.2;
    cout << endl << "Lbs: " << lbs << "\n\n";
    return 0;
}
```

(Demo with onlinegdb)

In Pairs or Triples:

Predict what the following pieces of code will do:

```
//Another C++ program; Demonstrates loops
#include <iostream>
using namespace std;

int main ()
{
    int i,j;
    for (i = 0; i < 4; i++)
    {
        cout << "The world turned upside down...\n";
    }

    for (j = 10; j > 0; j--)
    {
        cout << j << " ";
    }
    cout << "Blast off!!" << endl;

    return 0;
}
```

C++ Demo

```
//Another C++ program; Demonstrates loops
#include <iostream>
using namespace std;

int main ()
{
    int i,j;
    for (i = 0; i < 4; i++)
    {
        cout << "The world turned upside down...\n";
    }

    for (j = 10; j > 0; j--)
    {
        cout << j << " ";
    }
    cout << "Blast off!!" << endl;
    return 0;
}
```

(Demo with onlinedb)

Definite loops

```
//Another C++ program; Demonstrates loops
#include <iostream>
using namespace std;

int main ()
{
    int i,j;
    for (i = 0; i < 4; i++)
    {
        cout << "The world turned upside down...\n";
    }

    for (j = 10; j > 0; j--)
    {
        cout << j << " ";
    }
    cout << "Blast off!!" << endl;

    return 0;
}
```

General format:

```
for ( initialization ; test ; updateAction )
{
    command1;
    command2;
    command3;
    ...
}
```

In Pairs or Triples:

Predict what the following pieces of code will do:

```
//Growth example
#include <iostream>
using namespace std;

int main ()
{
    int population = 100;
    cout << "Year\tPopulation\n";
    for (int year = 0; year < 100; year= year+5)
    {
        cout << year << "\t" << population << "\n";
        population = population * 2;
    }
    return 0;
}
```

C++ Demo

```
//Growth example
#include <iostream>
using namespace std;

int main ()
{
    int population = 100;
    cout << "Year\tPopulation\n";
    for (int year = 0; year < 100; year= year+5)
    {
        cout << year << "\t" << population << "\n";
        population = population * 2;
    }
    return 0;
}
```

(Demo with C++)

In Pairs or Triples:

Predict what the following pieces of code will do:

```
//Another C++ program; Demonstrates loops
#include <iostream>
using namespace std;

int main ()
{
    int i,j,size;
    cout << "Enter size: ";
    cin >> size;
    for (i = 0; i < size; i++)
    {
        for (j = 0; j < size; j++)
        {
            cout << "*";
            cout << endl;
        }
        cout << "\n\n";
        for (i = size; i > 0; i--)
        {
            for (j = 0; j < i; j++)
            {
                cout << "*";
                cout << endl;
            }
        }
        return 0;
    }
}
```

C++ Demo

```
//Another C++ program; Demonstrates loops
#include <iostream>
using namespace std;

int main ()
{
    int i,j,size;
    cout << "Enter size: ";
    cin >> size;
    for (i = 0; i < size; i++)
    {
        for (j = 0; j < size; j++)
        {
            cout << "*";
            cout << endl;
        }
        cout << "\n\n";
        for (i = size; i > 0; i--)
        {
            for (j = 0; j < i; j++)
            {
                cout << "*";
                cout << endl;
            }
        }
        return 0;
    }
}
```

(Demo with C++)

Lecture Slips

In pairs or triples: **translate** the C++ program into Python:

```
//Growth example
#include <iostream>
using namespace std;

int main ()
{
    int population = 100;
    cout << "Year\tPopulation\n";
    for (int year = 0; year < 100; year= year+5)
    {
        cout << year << "\t" << population << "\n";
        population = population * 2;
    }
    return 0;
}
```

Recap: C++

- On lecture slip, write down a topic you wish we had spent more time (and why).

Recap: C++

- On lecture slip, write down a topic you wish we had spent more time (and why).
- C++ is a popular programming language that extends C.
