

# CSci 127: Introduction to Computer Science

[hunter.cuny.edu/csci](http://hunter.cuny.edu/csci)

# Announcements

- Apologies for ending early last week– I was following the clock which was 7 minutes early.

# Announcements

- Apologies for ending early last week– I was following the clock which was 7 minutes early.
- Lab will be closed Wednesday 4-6:30pm due to a special event.  
You're invited to the event: rescheduled OpenData Showcase, 4:30-6pm in CafeWest.

# Announcements

- Apologies for ending early last week– I was following the clock which was 7 minutes early.
- Lab will be closed Wednesday 4-6:30pm due to a special event.  
You're invited to the event: rescheduled OpenData Showcase, 4:30-6pm in CafeWest.
- Spring Break:  
Friday, 30 March to Sunday, 8 April.

# Announcements

- Apologies for ending early last week– I was following the clock which was 7 minutes early.
- Lab will be closed Wednesday 4-6:30pm due to a special event.  
You're invited to the event: rescheduled OpenData Showcase, 4:30-6pm in CafeWest.
- Spring Break:  
Friday, 30 March to Sunday, 8 April.
- Each lecture includes a survey of computing research and tech in NYC.  
*Today: Anna Whitney (Google).*

# Frequently Asked Questions

From lecture slips & recitation sections.

- How can I prepare for the paper quizzes (and the final)?

*Starting this week, we'll end with quiz & final practice questions. No new material— focus on problem solving.*

*(If you need to leave early, do so before we start so to not disturb your classmates.)*

# Frequently Asked Questions

From lecture slips & recitation sections.

- How can I prepare for the paper quizzes (and the final)?  
*Starting this week, we'll end with quiz & final practice questions. No new material– focus on problem solving.  
(If you need to leave early, do so before we start so to not disturb your classmates.)*
- Do I have to take the final?  
*Yes, you have to pass the final (60 out of 100 points) to pass the class.*

# Frequently Asked Questions

From lecture slips & recitation sections.

- How can I prepare for the paper quizzes (and the final)?  
*Starting this week, we'll end with quiz & final practice questions. No new material– focus on problem solving.  
(If you need to leave early, do so before we start so to not disturb your classmates.)*
- Do I have to take the final?  
*Yes, you have to pass the final (60 out of 100 points) to pass the class.*
- Can I take the course No Credit/Credit?  
*Yes, but check with your advisor that it is possible with your major and standing.*

# Frequently Asked Questions

From lecture slips & recitation sections.

- How can I prepare for the paper quizzes (and the final)?  
*Starting this week, we'll end with quiz & final practice questions. No new material– focus on problem solving.*  
*(If you need to leave early, do so before we start so to not disturb your classmates.)*
- Do I have to take the final?  
*Yes, you have to pass the final (60 out of 100 points) to pass the class.*
- Can I take the course No Credit/Credit?  
*Yes, but check with your advisor that it is possible with your major and standing.*
- To earn a Credit grade, what do I need?

# Frequently Asked Questions

From lecture slips & recitation sections.

- How can I prepare for the paper quizzes (and the final)?  
*Starting this week, we'll end with quiz & final practice questions. No new material– focus on problem solving.  
(If you need to leave early, do so before we start so to not disturb your classmates.)*
- Do I have to take the final?  
*Yes, you have to pass the final (60 out of 100 points) to pass the class.*
- Can I take the course No Credit/Credit?  
*Yes, but check with your advisor that it is possible with your major and standing.*
- To earn a Credit grade, what do I need?
  - ▶ *Final can replace missing lecture slips or quizzes. Programs are 30%.*

  - ▶ *Always good to aim a bit higher!*

# Today's Topics

- Functions
- Github
- Anna Whitney (Google) & Design Challenge
- Final Exam Overview

# Functions

- Functions are a way to break code into pieces, that can be easily reused.

```
#Name: your name here  
#Date: October 2017  
#This program, uses functions,  
#    says hello to the world!
```

```
def main():  
    print("Hello, World!")
```

```
if __name__ == "__main__":  
    main()
```

# Functions

```
#Name: your name here  
#Date: October 2017  
#This program, uses functions,  
#    says hello to the world!
```

```
def main():  
    print("Hello, World!")
```

```
if __name__ == "__main__":  
    main()
```

- Functions are a way to break code into pieces, that can be easily reused.
- Many languages require that all code must be organized with functions.

# Functions

```
#Name: your name here
#Date: October 2017
#This program, uses functions,
#    says hello to the world!

def main():
    print("Hello, World!")

if __name__ == "__main__":
    main()
```

- Functions are a way to break code into pieces, that can be easily reused.
- Many languages require that all code must be organized with functions.
- The opening function is often called `main()`

# Functions

```
#Name: your name here
#Date: October 2017
#This program, uses functions,
#    says hello to the world!

def main():
    print("Hello, World!")

if __name__ == "__main__":
    main()
```

- Functions are a way to break code into pieces, that can be easily reused.
- Many languages require that all code must be organized with functions.
- The opening function is often called `main()`
- You **call** or **invoke** a function by typing its name, followed by any input parameters, surrounded by parenthesis:

# Functions

```
#Name: your name here
#Date: October 2017
#This program, uses functions,
#    says hello to the world!

def main():
    print("Hello, World!")

if __name__ == "__main__":
    main()
```

- Functions are a way to break code into pieces, that can be easily reused.
- Many languages require that all code must be organized with functions.
- The opening function is often called `main()`
- You **call** or **invoke** a function by typing its name, followed by any input parameters, surrounded by parenthesis:  
Example: `print("Hello", "World")`

# Functions

```
#Name: your name here
#Date: October 2017
#This program, uses functions,
#    says hello to the world!

def main():
    print("Hello, World!")

if __name__ == "__main__":
    main()
```

- Functions are a way to break code into pieces, that can be easily reused.
- Many languages require that all code must be organized with functions.
- The opening function is often called `main()`
- You **call** or **invoke** a function by typing its name, followed by any input parameters, surrounded by parenthesis:  
Example: `print("Hello", "World")`
- Can write, or **define** your own functions,

# Functions

```
#Name: your name here
#Date: October 2017
#This program, uses functions,
#    says hello to the world!

def main():
    print("Hello, World!")

if __name__ == "__main__":
    main()
```

- Functions are a way to break code into pieces, that can be easily reused.

- The opening function is often called `main()`
- You **call** or **invoke** a function by typing its name, followed by any input parameters, surrounded by parenthesis:  
Example: `print("Hello", "World")`
- Can write, or **define** your own functions, which are stored, until invoked or called.

# In Pairs or Triples:

*Predict what the code will do:*

```
#Greet loop example

def greetLoop(person):
    print("Greetings")
    for i in range(5):
        print("Hello", person)

greetLoop("Thomas")
```

```
# From "Teaching with Python" by John Zelle

def happy():
    print("Happy Birthday to you!")

def sing(P):
    happy()
    happy()
    print("Happy Birthday dear " + P + "!")
    happy()

sing("Fred")
sing("Thomas")
sing("Hunter")
```

# Python Tutor

```
#Greet loop example

def greetLoop(person):
    print("Greetings")
    for i in range(5):
        print("Hello", person)

greetLoop("Thomas")
```

```
# From "Teaching with Python" by John Zelle
```

```
def happy():
    print("Happy Birthday to you!")

def sing(P):
    happy()
    happy()
    print("Happy Birthday dear " + P + "!")
    happy()

sing('Fred')
sing('Thomas')
sing('Hunter')
```

(Demo with pythonTutor)

# Input Parameters & Return Values

- Functions can have **input parameters**.

```
def totalWithTax(food,tip):  
    total = 0  
    tax = 0.0875  
    total = food + food * tax  
    total = total + tip  
    return(total)  
  
lunch = float(input('Enter lunch total: '))  
lTip = float(input('Enter lunch tip: ' ))  
lTotal = totalWithTax(lunch, lTip)  
print('Lunch total is', lTotal)  
  
dinner= float(input('Enter dinner total: '))  
dTip = float(input('Enter dinner tip: ' ))  
dTotal = totalWithTax(dinner, dTip)  
print('Dinner total is', dTotal)
```

# Input Parameters & Return Values

- Functions can have **input parameters**.
- Surrounded by parentheses, both in the function definition, and in the function call (invocation).

```
def totalWithTax(food,tip):  
    total = 0  
    tax = 0.0875  
    total = food + food * tax  
    total = total + tip  
    return(total)  
  
lunch = float(input('Enter lunch total: '))  
lTip = float(input('Enter lunch tip: ' ))  
lTotal = totalWithTax(lunch, lTip)  
print('Lunch total is', lTotal)  
  
dinner= float(input('Enter dinner total: '))  
dTip = float(input('Enter dinner tip: ' ))  
dTotal = totalWithTax(dinner, dTip)  
print('Dinner total is', dTotal)
```

# Input Parameters & Return Values

- Functions can have **input parameters**.
- Surrounded by parentheses, both in the function definition, and in the function call (invocation).
- The “placeholders” in the function definition: **formal parameters**.

```
def totalWithTax(food,tip):  
    total = 0  
    tax = 0.0875  
    total = food + food * tax  
    total = total + tip  
    return(total)  
  
lunch = float(input('Enter lunch total: '))  
lTip = float(input('Enter lunch tip: '))  
lTotal = totalWithTax(lunch, lTip)  
print('Lunch total is', lTotal)  
  
dinner= float(input('Enter dinner total: '))  
dTip = float(input('Enter dinner tip: '))  
dTotal = totalWithTax(dinner, dTip)  
print('Dinner total is', dTotal)
```

# Input Parameters & Return Values

- Functions can have **input parameters**.
- Surrounded by parentheses, both in the function definition, and in the function call (invocation).
- The “placeholders” in the function definition: **formal parameters**.
- The ones in the function call: **actual parameters**

```
def totalWithTax(food,tip):  
    total = 0  
    tax = 0.0875  
    total = food + food * tax  
    total = total + tip  
    return(total)  
  
lunch = float(input('Enter lunch total: '))  
lTip = float(input('Enter lunch tip: ' ))  
lTotal = totalWithTax(lunch, lTip)  
print('Lunch total is', lTotal)  
  
dinner= float(input('Enter dinner total: '))  
dTip = float(input('Enter dinner tip: ' ))  
dTotal = totalWithTax(dinner, dTip)  
print('Dinner total is', dTotal)
```

# Input Parameters & Return Values

```
def totalWithTax(food,tip):  
    total = 0  
    tax = 0.0875  
    total = food + food * tax  
    total = total + tip  
    return(total)  
  
lunch = float(input('Enter lunch total: '))  
lTip = float(input('Enter lunch tip: '))  
lTotal = totalWithTax(lunch, lTip)  
print('Lunch total is', lTotal)  
  
dinner= float(input('Enter dinner total: '))  
dTip = float(input('Enter dinner tip: '))  
dTotal = totalWithTax(dinner, dTip)  
print('Dinner total is', dTotal)

- Possible solutions:
  - ▶ 7 orders of mixed fruit, or
  - ▶ 2 orders hot wings, 1 order mixed fruit, and 1 sampler plate.

# Design Challenge

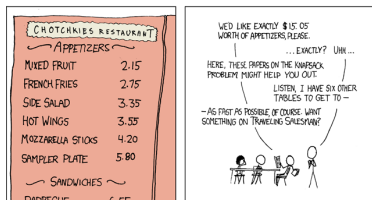

MY HOBBY:  
EMBEDDING NP-COMPLETE PROBLEMS IN RESTAURANT ORDERS

- Possible solutions:
  - ▶ 7 orders of mixed fruit, or
  - ▶ 2 orders hot wings, 1 order mixed fruit, and 1 sampler plate.
- **Input:** List of items with prices and amount to be spent.

# Design Challenge

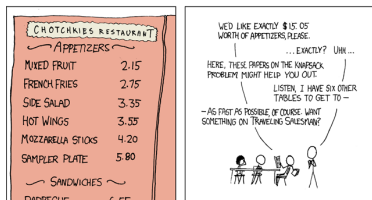

MY HOBBY:  
EMBEDDING NP-COMPLETE PROBLEMS IN RESTAURANT ORDERS

- Possible solutions:
  - ▶ 7 orders of mixed fruit, or
  - ▶ 2 orders hot wings, 1 order mixed fruit, and 1 sampler plate.
- **Input:** List of items with prices and amount to be spent.
- **Output:** An order that totals to the amount or empty list if none.

# Design Challenge

MY HOBBY:  
EMBEDDING NP-COMPLETE PROBLEMS IN RESTAURANT ORDERS

- Possible solutions:
  - ▶ 7 orders of mixed fruit, or
  - ▶ 2 orders hot wings, 1 order mixed fruit, and 1 sampler plate.
- **Input:** List of items with prices and amount to be spent.
- **Output:** An order that totals to the amount or empty list if none.
- Possible algorithms: For each item on the list, divide total by price. If no remainder, return a list of that item. Repeat with two items, trying 1 of the first, 2 of the first, etc. Repeat with three items, etc.

# Design Challenge

- Possible solutions:
  - ▶ 7 orders of mixed fruit, or
  - ▶ 2 orders hot wings, 1 order mixed fruit, and 1 sampler plate.
- **Input:** List of items with prices and amount to be spent.
- **Output:** An order that totals to the amount or empty list if none.
- Possible algorithms: For each item on the list, divide total by price. If no remainder, return a list of that item. Repeat with two items, trying 1 of the first, 2 of the first, etc. Repeat with three items, etc.
- “NP-Complete” problem: possible answers can be checked quickly, but not known how to compute quickly.

# Recap

- On lecture slip, write down a topic you wish we had spent more time (and why).

```
#Name: your name here
#Date: October 2017
#This program, uses functions,
#    says hello to the world!

def main():
    print("Hello, World!")

if __name__ == "__main__":
    main()
```

# Recap

- On lecture slip, write down a topic you wish we had spent more time (and why).
- Functions are a way to break code into pieces, that can be easily reused.

```
#Name: your name here
